

LABOR DRONE

LICENSED REPAIR & SERVICE MANUAL

Agate

COOL

girl

Heyyy!!

While not the most sophisticated form of automated labor, the ~~drone~~ is a cost-effective solution to affective labor deficits.

CONTROLS

- *Click body parts to access their interface.
- *Mouse wheel, up/down arrow keys, or W/S will view different parts of its body.

HER

PARTS

"EGGS AND BACON" CAN BE OUR ALIGNMENT PHRASE, OK?

HEAD

The head contains a diagnostic chip. It will display any errors your ~~drone~~ may be experiencing.

The faceplate can be removed for easy cleaning.

THROAT

Throat contraction frequency is tied to heart rate.

Press Spacebar to align correct vocal phrase. Incorrect alignment increases heart rate.

HEART

~~0 or 100% = Cardiac Burst. These models are great for midline work, but their hearts are prone to exploding in extreme situations. That's why we sell them in 10-packs, now at the absolute bargain of 500 dollars.~~

GUT

OH... MAYBE DON'T READ THIS PART, SIS ok!!!

Leaky intestinal tubing may cause heart rate to increase. Click on broken gut segments to caulk.

HANDS

Keep the pressure calibrated.

REPAIR DRONE

Arrow keys or WASD to control.

Watch out for internal debris. The drone can only take a few hits before being destroyed.

The drone will automatically locate the target wound if it survives long enough inside the body. As Florence Nightingale once famously said: Skate or die!
